

Assignment5 - Part1

By 2018101075

Dataset

$$x = 1 - (0.75 \times 40 + 1) / 100 = 0.64$$

$$y = 75 \times 3 = 0$$

P(Observation = Red State = Red)	0.9
P(Observation = Green State = Green)	0.85

There are 5 states and two actions (Left, Right).

States S1, S2, S5 are Red and S3, S4 are green.

When an agent takes action Left, it goes to the left state with a probability x and goes to the right state with a probability $1-x$.

Similarly when the action Right is chosen, the agent goes to the right state with a probability x and goes to the left state with a probability $1-x$. When the agent is in one of the extreme states (S1 or S5) and decides to go in the direction of the wall, it remains in the same state.

Calculating Belief State

$$\begin{aligned} b'(s') &= \Pr(s' | o, a, b) \\ &= (O(s', a, o) * \sum T(s, a, s') b(s)) / \Pr(o | a, b) \end{aligned}$$

Where s = old state,

b = old belief state, and $b(s)$ probability of s given belief state b ,
 a = action,
 b' = new belief state,
 $b'(s')$ = probability of s' given b' ,
 o = observation.

We first calculate $Ub'[s'] = O(s', a, o) * \sum T(s, a, s') b(s)$
 Then $b' = Ub' / \sum Ub'[s']$

Step 1

Initially, the agent knows that it is in one of the red states i.e. S_1 , S_2 or S_5 .

Therefore belief $b = [1 / 3, 1 / 3, 0, 0, 1 / 3]$

Agent took the action Right and observed Red

$$\begin{aligned}
 Ub'(s_1) &= \Pr(\text{Red} \mid s_1, \text{Right}) * [\Pr(s_1 \mid s_1, \text{Right}) * b(s_1) + \Pr(s_1 \mid s_2, \text{Right}) * b(s_2) \\
 &\quad + \Pr(s_1 \mid s_3, \text{Right}) * b(s_3) + \Pr(s_1 \mid s_4, \text{Right}) * b(s_4) + \Pr(s_1 \mid s_5, \text{Right}) * b(s_5)] \\
 &= 0.9 * [(1 - x) * 0.33 + (1 - x) * 0.33 + 0 + 0 + 0] \\
 &= 0.216
 \end{aligned}$$

$$\begin{aligned}
 Ub'(s_2) &= \Pr(\text{Red} \mid s_2, \text{Right}) * [\Pr(s_2 \mid s_1, \text{Right}) * b(s_1) + \Pr(s_2 \mid s_2, \text{Right}) * b(s_2) \\
 &\quad + \Pr(s_2 \mid s_3, \text{Right}) * b(s_3) + \Pr(s_2 \mid s_4, \text{Right}) * b(s_4) + \Pr(s_2 \mid s_5, \text{Right}) * b(s_5)] \\
 &= 0.9 * [x * 0.33 + 0 + 0 + 0 + 0] \\
 &= 0.192
 \end{aligned}$$

$$\begin{aligned}
Ub'(s3) &= \text{Pr}(\text{Red} \mid s3, \text{Right}) * [\text{Pr}(s3 \mid s1, \text{Right}) * b(s1) + \text{Pr}(s3 \mid s2, \text{Right}) * b(s2) + \text{Pr}(s3 \mid s3, \text{Right}) * b(s3) + \text{Pr}(s3 \mid s4, \text{Right}) * b(s4) + \text{Pr}(s3 \mid s5, \text{Right}) * b(s5)] \\
&= 0.1 * [0 + x * 0.33 + 0 + 0 + 0] \\
&= 0.02133
\end{aligned}$$

$$\begin{aligned}
Ub'(s4) &= \text{Pr}(\text{Red} \mid s4, \text{Right}) * [\text{Pr}(s4 \mid s1, \text{Right}) * b(s1) + \text{Pr}(s4 \mid s2, \text{Right}) * b(s2) + \text{Pr}(s4 \mid s3, \text{Right}) * b(s3) + \text{Pr}(s4 \mid s4, \text{Right}) * b(s4) + \text{Pr}(s4 \mid s5, \text{Right}) * b(s5)] \\
&= 0.1 * [0 + 0 + 0 + 0 + (1 - x) * 0.33] \\
&= 0.012
\end{aligned}$$

$$\begin{aligned}
Ub'(s5) &= \text{Pr}(\text{Red} \mid s5, \text{Right}) * [\text{Pr}(s5 \mid s1, \text{Right}) * b(s1) + \text{Pr}(s5 \mid s2, \text{Right}) * b(s2) + \text{Pr}(s5 \mid s3, \text{Right}) * b(s3) + \text{Pr}(s5 \mid s4, \text{Right}) * b(s4) + \text{Pr}(s5 \mid s5, \text{Right}) * b(s5)] \\
&= 0.9 * [0 + 0 + 0 + 0 + x * 0.33] \\
&= 0.192
\end{aligned}$$

Let $p = \text{sum}(Ub') = 0.63333$

$b' = Ub' / p$

Therefore $b' = [0.34105, 0.30315, 0.03368, 0.01894, 0.30315]$

Step 2

Now belief $b = [0.34105, 0.30315, 0.03368, 0.01894, 0.30315]$

Agent took the action Left and observed Green

$$\begin{aligned}
Ub'(s1) &= \text{Pr}(\text{Green} \mid s1, \text{Left}) * [\text{Pr}(s1 \mid s1, \text{Left}) * b(s1) + \text{Pr}(s1 \mid s2, \text{Left}) * b(s2) + \text{Pr}(s1 \mid s3, \text{Left}) * b(s3) + \text{Pr}(s1 \mid s4, \text{Left}) * b(s4) \\
&\quad + \text{Pr}(s1 \mid s5, \text{Left}) * b(s5)] \\
&= 0.15 * [x * b[s1] + x * b[s2] + 0 + 0 + 0] \\
&= 0.06184
\end{aligned}$$

$$\begin{aligned}
Ub'(s2) &= \text{Pr}(\text{Green} \mid s2, \text{Left}) * [\text{Pr}(s2 \mid s1, \text{Left}) * b(s1) + \text{Pr}(s2 \mid s2, \text{Left}) * b(s2) + \text{Pr}(s2 \mid s3, \text{Left}) * b(s3) + \text{Pr}(s2 \mid s4, \text{Left}) * b(s4) \\
&\quad + \text{Pr}(s2 \mid s5, \text{Left}) * b(s5)] \\
&= 0.15 * [(1 - x) * b[s1] + 0 + x * b[s3] + 0 + 0] \\
&= 0.02165
\end{aligned}$$

$$\begin{aligned}
Ub'(s3) &= \text{Pr}(\text{Green} \mid s3, \text{Left}) * [\text{Pr}(s3 \mid s1, \text{Left}) * b(s1) + \text{Pr}(s3 \mid s2, \text{Left}) * b(s2) + \text{Pr}(s3 \mid s3, \text{Left}) * b(s3) + \text{Pr}(s3 \mid s4, \text{Left}) * b(s4) \\
&\quad + \text{Pr}(s3 \mid s5, \text{Left}) * b(s5)] \\
&= 0.85 * [0 + (1 - x) * b[s2] + 0 + x * b[s4] + 0] \\
&= 0.10307
\end{aligned}$$

$$\begin{aligned}
Ub'(s4) &= \text{Pr}(\text{Green} \mid s4, \text{Left}) * [\text{Pr}(s4 \mid s1, \text{Left}) * b(s1) + \text{Pr}(s4 \mid s2, \text{Left}) * b(s2) + \text{Pr}(s4 \mid s3, \text{Left}) * b(s3) + \text{Pr}(s4 \mid s4, \text{Left}) * b(s4) \\
&\quad + \text{Pr}(s4 \mid s5, \text{Left}) * b(s5)] \\
&= 0.85 * [0 + 0 + (1 - x) * b[s3] + 0 + x * b[s5]] \\
&= 0.17522
\end{aligned}$$

$$\begin{aligned}
Ub'(s5) &= \text{Pr}(\text{Green} \mid s5, \text{Left}) * [\text{Pr}(s5 \mid s1, \text{Left}) * b(s1) + \text{Pr}(s5 \mid s2, \text{Left}) * b(s2) + \text{Pr}(s5 \mid s3, \text{Left}) * b(s3) + \text{Pr}(s5 \mid s4, \text{Left}) * b(s4) \\
&\quad + \text{Pr}(s5 \mid s5, \text{Left}) * b(s5)] \\
&= 0.15 * [0 + 0 + 0 + (1 - x) * b[s4] + (1 - x) * b[s5]]
\end{aligned}$$

$$= 0.01739$$

$$\text{Let } p = \text{sum}(Ub') = 0.37918$$

$$b' = Ub' / p$$

$$\text{Therefore } b' = [0.16309, 0.05709, 0.27182, 0.46210, 0.04587]$$

Step 3

$$\text{Now belief } b = [0.16309, 0.05709, 0.27182, 0.46210, 0.04587]$$

Agent took the action Left and observed Green

$$\begin{aligned} Ub'(s1) &= \text{Pr}(\text{Green} \mid s1, \text{Left}) * [\text{Pr}(s1 \mid s1, \text{Left}) * b(s1) + \text{Pr}(s1 \mid s2, \text{Left}) * b(s2) \\ &+ \text{Pr}(s1 \mid s3, \text{Left}) * b(s3) + \text{Pr}(s1 \mid s4, \text{Left}) * b(s4) + \text{Pr}(s1 \mid s5, \text{Left}) * b(s5)] \\ &= 0.15 * [x * b[s1] + x * b[s2] + 0 + 0 + 0] \\ &= 0.02113 \end{aligned}$$

$$\begin{aligned} Ub'(s2) &= \text{Pr}(\text{Green} \mid s2, \text{Left}) * [\text{Pr}(s2 \mid s1, \text{Left}) * b(s1) + \text{Pr}(s2 \mid s2, \text{Left}) * b(s2) \\ &+ \text{Pr}(s2 \mid s3, \text{Left}) * b(s3) + \text{Pr}(s2 \mid s4, \text{Left}) * b(s4) + \text{Pr}(s2 \mid s5, \text{Left}) * b(s5)] \\ &= 0.15 * [(1 - x) * b[s1] + 0 + x * b[s3] + 0 + 0] \\ &= 0.03490 \end{aligned}$$

$$\begin{aligned} Ub'(s3) &= \text{Pr}(\text{Green} \mid s3, \text{Left}) * [\text{Pr}(s3 \mid s1, \text{Left}) * b(s1) + \text{Pr}(s3 \mid s2, \text{Left}) * b(s2) \\ &+ \text{Pr}(s3 \mid s3, \text{Left}) * b(s3) + \text{Pr}(s3 \mid s4, \text{Left}) * b(s4) + \text{Pr}(s3 \mid s5, \text{Left}) * b(s5)] \\ &= 0.85 * [0 + (1 - x) * b[s2] + 0 + x * b[s4] + 0] \end{aligned}$$

$$= 0.26885$$

$$\begin{aligned} Ub'(s4) &= \Pr(\text{Green} \mid s4, \text{Left}) * [\Pr(s4 \mid s1, \text{Left}) * b(s1) + \Pr(s4 \mid s2, \text{Left}) * b(s2) + \Pr(s4 \mid s3, \text{Left}) * b(s3) + \Pr(s4 \mid s4, \text{Left}) * b(s4) \\ &\quad + \Pr(s4 \mid s5, \text{Left}) * b(s5)] \\ &= 0.85 * [0 + 0 + (1 - x) * b[s3] + 0 + x * b[s5]] \\ &= 0.10813 \end{aligned}$$

$$\begin{aligned} Ub'(s5) &= \Pr(\text{Green} \mid s5, \text{Left}) * [\Pr(s5 \mid s1, \text{Left}) * b(s1) + \Pr(s5 \mid s2, \text{Left}) * b(s2) + \Pr(s5 \mid s3, \text{Left}) * b(s3) + \Pr(s5 \mid s4, \text{Left}) * b(s4) \\ &\quad + \Pr(s5 \mid s5, \text{Left}) * b(s5)] \\ &= 0.15 * [0 + 0 + 0 + (1 - x) * b[s4] + (1 - x) * b[s5]] \\ &= 0.02743 \end{aligned}$$

$$\text{Let } p = \text{sum}(Ub') = 0.46046$$

$$b' = Ub' / p$$

$$\text{Therefore } b' = [0.04590, 0.07579, 0.58388, 0.23483, 0.05957]$$
